

David Lomas Gonzalez

Jocotepec, Jalisco, Mexico | +1 760 938 5767 | pitaya712@outlook.com

Summary

As a Senior Full Stack Developer, I specialize in building intelligent, scalable systems with a strong focus on algorithmic efficiency. Experienced across both front-end and back-end technologies, I'm skilled in React, Angular, Web3, Node.js, PHP, and .NET. I actively integrate Machine Learning and Artificial Intelligence to deliver smarter, data-driven applications and automation solutions. A passionate contributor to the tech community, I stay at the forefront of emerging tools and frameworks to continuously improve software performance and innovation.

Education

Instituto Tecnológico de Tlajomulco Jalisco

2011-2015

Gained Bachelor's degree of Computer Science

Experience

Full Stack Web3 Developer, TOKENTRAXX

Oct, 2021 – Sep, 2025

The main stage for music in Web3. Connecting artists and fans to mint the sound of a decentralized future

- Built a shared **UI** component library **Storybook**, published to **GitLab's** npm registry, and documented best practices in **Confluence**.
- Developed responsive, user-friendly interfaces from **Figma** designs, enhancing onboarding flow and engagement.
- Designed and implemented **Web3** wallet infrastructure enabling seamless onboarding for both crypto-native and social login users, with enhanced security architecture to safeguard against dependency-based attacks.
- Built back-end APIs for NFT minting, listing, buying, selling, and auctions, integrating decentralized storage via **AWS S3** and **Arweave**, and connected to **TRAXX** Studios, a network of customizable NFT marketplaces.
- Implemented live video conferencing and collaboration tools using **WebRTC**, improving artist-fan interaction.
- Created an admin dashboard for user and content management.
- Enhanced data performance and scalability with **GraphQL**, **Microservices** architecture, **Docker**, and **Kubernetes**.
- Integrated Ethereum **Smart Contracts** using **Web3**, **Solidity**, and **Polymesh**, enabling secure and transparent NFT transactions.
- Leveraged **OpenAI GPT** and **LangChain** APIs to build **LLM**-powered assistants for intelligent chat automation and context-aware knowledge retrieval.
- Applied **NLP** techniques with **spaCy** and **NLTK** to extract sentiment insights and drive **UX** improvements.
- Developed predictive models with **TensorFlow**, combining weather and location datasets to forecast user engagement and optimize content scheduling.
- Applied machine learning optimization using **scikit-learn** to improve routing, content delivery, and overall operational efficiency.

- Built and maintained end-to-end testing pipelines with **Cypress** to ensure reliability across use cases.
- Utilized **AWS EC2** for scalable compute and **S3** for decentralized asset storage, achieving high availability and cost efficiency.

Full Stack Developer, ARENA

May 2018 – Sep 2021

Arena is a software startup developing the next generation of engagement tools powered by first party data

- Improved efficiency of existing solutions and fixing bugs for stable in end-user experience.
- Created components library for shared components, editable tables, and utilities.
- Created visually appealing and user-friendly interfaces by building responsive pages.
- Consulted regularly with customers for building user-friendly web application and contributed on revenue growth.
- Built a **RESTful** web service optimizing them for dynamic usage across mobile and web applications.
- Scraped data using **Python/Django** and created a new individual frontend to display live blogs.
- Designed and implemented real-time features such as live chat and live blogs using **WebRTC**, **Socket.IO** to improve user engagement on the platform.
- Developed and designed a responsive and efficient search system using **Elasticsearch**.
- Deployed services using **AWS**, including **EC2**, **S3**, and **RDS** to ensure high availability and easy scaling for customer-facing applications.
- Implemented a read-write split and a master-slave sync system, utilizing **AWS** for web service deployment and website hosting, with **Apache Kafka** as a messaging system.
- Integrated **Terraform** to manage infrastructure-as-code, automating cloud resource provisioning and reducing manual intervention.
- Wrote **Shell scripts** for deployment automation and streamlining various administrative tasks.
- Performed code review and **PHPUnit** tests and estimated tasks and applied clean code practices.
- Designed technical tasks for interviews and assisted in onboarding new team members.
- Worked on **Agile SDLC**, **Scrum Methodology** to practice-based methodology for modeling and documentation of software based systems.

Full Stack Developer, Myclubs

Feb, 2016 - Apr, 2018

The largest corporate fitness provider in Austria and Switzerland.

- Architected a **microservices-based platform** leveraging **Azure Functions**, **Azure SQL**, and **CosmosDB**, ensuring high scalability, fault tolerance, and performance.
- Developed a modern, responsive frontend with a strong focus on performance, maintainability, and **UX**, and integrated it seamlessly with secure, scalable backend APIs.
- Created custom components and reusable services to manage complex business logic and integrate with diverse external systems and data sources.
- Integrated with **Azure Notification Hubs** and **Azure Event Hub** to automate marketing campaigns, fitness challenges, and wellness notifications, ensuring reliability under high load.
- Designed and deployed an **interactive Power BI dashboard** that provided corporate clients with insights into employee participation, program effectiveness, and **ROI analytics**.

- Implemented **secure authentication and authorization** using **Azure Active Directory**, enabling seamless **SSO (Single Sign-On)** across corporate environments.
- Applied **Test-Driven Development (TDD)** and automated **unit testing pipelines** to enhance backend reliability and maintain robust code quality.
- Automated **deployment and server management** processes with **Shell scripting**, improving DevOps efficiency and consistency.
- Optimized data storage and retrieval using **Azure SQL**, **CosmosDB**, and **MongoDB**, ensuring high availability for both structured and unstructured data.
- Collaborated in **Agile teams**, contributing to sprint planning, retrospectives, and daily standups to drive iterative delivery and cross-functional alignment.

Skills & abilities

- | | |
|--|--|
| • Javascript / Typescript | • Material-UI, Anti-UI, Chakra-ui, PrimeNG |
| • React Redux Next | • RESTful API, Google APIs |
| • Angular RxJS NgRX | • WebRTC |
| • Storybook | • gRPC |
| • Node.js Express.js Nest.js Fastify | • NPM |
| • PHP Laravel, Symfony | • AWS (Dynamodb, S3 bucket, Lambda, SQS, |
| • Python Django, C++, C#, Go | • EC2), Azure |
| • .NET, .NET Core, ASP.NET, ASP.NET Core, | • Nginx |
| • ADO.NET, WCF, WPF, Web Forms, Win Forms, Entity Framework, Blazor, BizTalk | • Docker, Kubernetes, Jenkins, Maven, |
| • Rust, Solidity Web3 Ether | • Terraform |
| • OpenZeppelin, Truffle | • Machine Learning, Predictive Modeling, Optimization (Python, scikit-learn, TensorFlow) |
| • BTC ETH BSC Polygon | • NLP (spaCy, NLTK) |
| • IPFS | • Pandas, NumPy |
| • Avalanche Solana | • LLM, Generative AI, OpenAI, ChatGPT, LangChain |
| • SQL, MySQL, Postgresql | • Git, GitLab |
| • MongoDB, Redis | • Jira, Notion, Trello |
| • GraphQL | • Subversion (SVN) |
| • Swagger | • Scrum |
| • Apache Cassandra, Kafka, Elasticsearch | |
| • Jest, Mocha, PHPUnit, NUnit | |
| • Karma, Jasmine, Cypress | |
